SUMMARY

Backend Engineer with 3+ years of experience building scalable backend systems with a focus on clarity, stability, and long-term maintainability. Experienced in API design, database systems, and production integrations. Skilled in developing systems that evolve with business needs while remaining reliable and adaptable. Hands-on experience designing and implementing complex backend logic, including rule-based decision systems and workflow orchestration for multi-step business processes.

EXPERIENCE

Senior Software Developer **Mar. 2024 - Present**
FPT Software *Ho Chi Minh City, Vietnam*

Project: PSA

Backend Developer *May. 2026 - Jun. 2026*

- Performed Function Replication testing to validate functional equivalence between legacy TIBCO services and Java microservices by comparing execution logs and business results.
- Streamlined the Function Replication testing workflow, reducing validation time from **half a day to approximately one hour**, improving migration testing efficiency by **75%**.

Tech: Java 21

Project: Next-Generation Fintech Aggregator Platform (UAE Banks)

Backend Developer *Nov. 2024 - May. 2026*

- Developed backend services for a **multi-bank digital lending platform**, enabling automated onboarding, eligibility assessment, and credit approval
- Engineered core **financial calculation modules**, including credit limit assignment, Debt Burden Ratio computation, multi-product eligibility scoring, etc
- Designed and evolved rule-based decision systems using **Drools** to support segmentation, deviation handling, and automated offer matching across partner banks
- Developed backend logic supporting Camunda BPM-driven loan workflows, ensuring alignment with application, review, and approval stages
- Integrated with **external financial systems (AECB, FTS, FinOne)** for identity verification and financial data processing
- Designed, implemented, and maintained **microservices**, ensuring scalable and reusable backend components across multiple banking partners
- Supported production deployments and **on-site launch activities in the UAE**, collaborating with client teams to resolve incidents, stabilize systems, and optimize performance

Tech: Java 17, Spring Boot, Drools, Camunda BPM, Oracle, AWS, Jenkins, ArgoCD

Project: Next Generation Platform (Ride-Hailing & Mobility System)

Backend Developer *Mar. 2024 - Oct. 2024*

- Developed backend services for a **microservices-based mobility platform** handling booking, driver assignment, and payment processing
- Implemented **event-driven communication (Kafka)** to improve service interaction and notification handling
- Developed backend services for **OpenAPI**, **SMS**, and **payment processing**, supporting high-performance operations and external integrations
- Implemented **IVR (Interactive Voice Response)** integrated with **ActiveMQ** for asynchronous communication workflows
- Developed backend logic across core services, including booking, trip management, and job dispatch
- Supported **data integration pipelines** using AWS Glue for upstream data processing
- Participated in **end-to-end testing, production support, and go-live activities**, ensuring system stability and service quality

Tech: Java, Spring Boot, Kafka, ActiveMQ, PostgreSQL, MongoDB, AWS

Associate Software Engineer **Jan. 2024 - Feb. 2024**

Doctor Anywhere *Ho Chi Minh City, Vietnam*

- Contributed to backend service development in a **healthcare platform**, supporting API implementation and basic service logic
- Assisted in debugging and testing backend services, ensuring correct functionality and stability

SKILLS

- **Languages:** Java
- **Backend & Frameworks:** Spring Boot
- **Messaging & Integration:** Apache Kafka, ActiveMQ
- **Databases:** PostgreSQL, Oracle, MongoDB
- **Cloud & DevOps:** AWS, Docker, GitHub Actions

CERTIFICATIONS

- AWS Certified Developer - Associate (Oct. 2026)
- Microsoft Certified: Azure AI Cloud Developer Associate (Oct. 2026)
- Microsoft Certified: SQL AI Developer Associate (Oct. 2026)
- Google AI Professional Certificate - Google (Mar. 2026)
- Cloud Developer Nanodegree - Udacity (Oct. 2024)

EDUCATION

FPT University **Sep 2019 - Nov 2023**

Bachelor of Technology (B.Tech), Software Engineering *GPA: 8.0 / 10*

ACTIVITIES

Sea x OpenAI Codex Hackathon Vietnam 2026 - Top 5 Finalist **Oct. 31, 2026**

Project: CoMech *Ho Chi Minh City, Vietnam*

- Achieved Top 5 in the Sea x OpenAI Regional Codex Hackathon - Vietnam 2026, collaborating in a four-member team to develop CoMech, an AI-powered voice assistant for Vietnamese motorbike repair shops
- Conducted user research and shop interviews, identifying operational pain points and translating findings into product requirements, business rules, and solution direction with Codex assistance
- Contributed to product strategy, workflow design, and business-rule validation, covering voice-based repair logging, automated customer approval calls, and repair record management
- Collaborated on AI-assisted development and testing using Codex, supporting integration of GPT-Live-1, Twilio, FastAPI, and React to deliver a functional MVP

Core Team Member, Facilitator, Volunteer, Speaker **Dec. 2023 - Present**

Google Developer Group - GDG Cloud Ho Chi Minh *Ho Chi Minh City, Vietnam*

- Supported organization and execution of developer events, workshops, and community programs focused on Google Cloud and AI technologies
- Facilitated hands-on codelab sessions, assisting participants in completing technical exercises and resolving issues during workshops
- Collaborated with core team members to coordinate logistics, improve event experience, and support community growth
- Assisted speakers and organizers in preparing technical sessions, ensuring smooth delivery and participant engagement
- Participated in Google Developer Groups Southeast Asia Summit 2025 (Bangkok, Thailand), engaging with regional communities and sharing knowledge

Hackathon Participant - Weekend Build With Codex - HCMC 2026 **May. 09, 2026**

Project: ViTeach *Ho Chi Minh City, Vietnam*

- Built ViTeach, a bilingual AI-powered education platform enabling teachers to analyze student performance through LMS score CSV uploads
- Developed AI-assisted workflows for student risk analysis, score trend evaluation, and intervention recommendation generation
- Collaborated in rapid MVP development during the hackathon, contributing to platform logic and multilingual experience design
- Worked with modern web and AI technologies including Next.js, TypeScript, Supabase, and AI integrations
